

# SEED PAPER

Seed Paper is an innovative and eco-friendly material choice in the promotional industry, offering a unique way to combine sustainability with brand messaging. Made from recycled paper embedded with seeds, Seed Paper can be planted after use, growing into flowers, herbs, or vegetables, depending on the seeds used.

Promotional products made from Seed Paper can include business cards, flyers, bookmarks, and other items that are typically disposable. By opting for Seed Paper, companies can showcase their commitment to sustainability and waste reduction, as the paper transforms into living plants instead of ending up in landfills.

The production process for Seed Paper involves collecting and recycling post-consumer paper waste, blending it into a pulp, and then embedding seeds into the pulp before pressing it into sheets. This process not only recycles paper but also promotes biodiversity and green spaces when the paper is planted.

Using Seed Paper for promotional items offers several advantages. It promotes the circular economy by turning waste into a resource for growth. It also provides a memorable and interactive experience for recipients, as they can plant the paper and watch it grow. Furthermore, the use of Seed Paper aligns with the growing consumer demand for eco-friendly and sustainable products, enhancing the brand's reputation and appeal.
